PRESIDENCY SCHOOL OF COMPUTER SCIENCE AND ENGINEERING

BONAFIDE CERTIFICATE

Certified that this report **"Face Recognition Attendance System"** is a bonafide work of **Shivprasad Patil (20221CSE0718),** who has successfully carried out the internship work and submitted the report for partial fulfillment of the requirements for the award of the degree of BACHELOR OF TECHNOLOGY in COMPUTER SCIENCE AND ENGINEERING during 2025-2026.

DECLARATION

I am a student of final year B.Tech in COMPUTER SCIENCE AND ENGINEERING, at Presidency University, Bengaluru, named SHIVPRASAD PATIL, hereby declare that the internship work titled **"FACE RECOGNITION ATTENDANCE SYSTEM"** has been independently carried out by me and submitted in partial fulfillment for the award of the degree of B.Tech in COMPUTER SCIENCE ENGINEERING during the academic year of 2025-2026. Further, the matter embodied in the internship has not been submitted previously by anybody for the award of any Degree or Diploma to any other institution.

SHIVPRASAD PATIL USN: 20221CSE0718 Signature

ABSTRACT

The internship project titled *"AI Face Recognition Attendance Management System"* focuses on automating traditional attendance methods using Artificial Intelligence and Computer Vision technologies. Conventional attendance systems are time-consuming, prone to human errors, and susceptible to proxy attendance, which affects reliability and efficiency. To address these challenges, this project proposes an automated, contactless solution that improves accuracy and reduces manual effort. The system is developed using React.js for the frontend, Flask for the backend, and advanced AI technologies such as InsightFace and OpenCV for face recognition. It captures real-time video through a webcam, detects faces, and identifies individuals by comparing facial features with stored datasets using deep learning-based embeddings.

The system ensures accurate and efficient attendance marking by automatically recording user identity along with date and time in a SQLite database. It also provides a web-based dashboard for managing users, viewing attendance records, and generating reports. The use of deep learning models enhances recognition accuracy even under varying lighting conditions, while OpenCV enables real-time processing. Performance testing shows that the system operates efficiently with minimal delay and high reliability. Overall, the project demonstrates a practical implementation of AI in automating attendance systems, improving productivity, security, and real-time monitoring capabilities.
